

Model name: 2_dense121_2-classes_dense512_masked

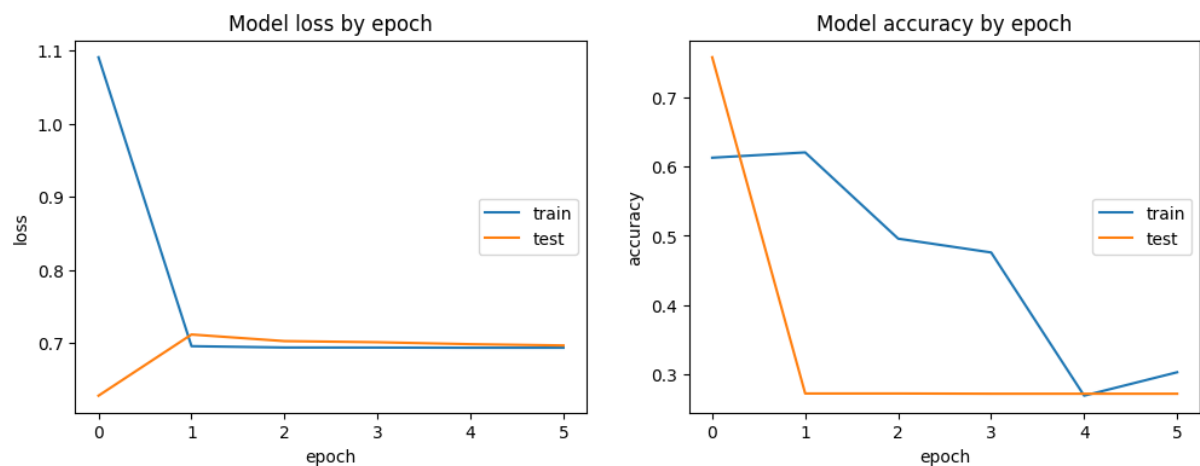

Description and underlying idea:

As seen on the Kaggle website, many people had good results with transfer learning. Hence we are trying as well here. Especially for the Densenet121 exists a dedicated pretrained parameter set trained for the recognition of medical diseases. Also we had the idea, that masking the images might help the model to train solely on lung details. Side note: We try first on only the Covid and Normal class and enhance the classification later.

Conclusion:

Unfortunately the Densenet121 based model didn't perform at all. Even with the medical parameter-set there was even less performance. We decide to not experiment with Densenet further.

Training History:

Performance Report / Recall normalized confusion matrix

	pre	rec	f1
normal	0.000000	0.000000	0.000000
covid	0.272464	0.998672	0.428124
avg_pre	0.074308	0.074308	0.074308
avg_rec	0.272365	0.272365	0.272365
